Ultracold gases and the BEC-BCS crossover

Roland Combescot 氏

Laboratoire de Physique Statistique
Ecole Normale Supérieure

5月1日(木) 10:30-
理学研究科合同B棟743号室

We first provide an overview of the field of ultracold gases, and in particular of superfluidity in these systems, stressing the features which makes them of very high interest. We will then more specifically deal with Fermi gases and with the remarkable BEC-BCS crossover which exhibits the link between Bose and Fermi superfluids.
